

Cocoapods

www.cocoapods.org

CocoaPods is the dependency manager for Swift and Objective-C Cocoa projects.

Terminal

```
pod init
```

Podfile

```
# Uncomment this line to define a global platform for your project
# platform :ios, '6.0'

target 'DatabaseDemo' do

end

target 'DatabaseDemoTests' do

end
```

Podfile

```
# Uncomment this line to define a global platform for your project
# platform :ios, '6.0'

target 'DatabaseDemo' do
  pod 'MagicalRecord'
end

target 'DatabaseDemoTests' do

end
```

Terminal

```
pod install
```

Bridging Header

Bridging Header

```
//  
// Use this file to import your target's public headers that you would like to expose to Swift.  
//  
  
#import <MagicalRecord/CoreData+MagicalRecord.h>  
#import <MagicalRecord/MagicalRecord.h>
```
